DETAILED ACTION

1. Claims 1 and 2 are pending.

Information Disclosure Statement

2. The information disclosure statement filed 12/05/01 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Land et al. (Land), U.S. Patent no. 6,008,805.

As per claim 1, Land discloses **a method for designing applications on an application server platform for data, comprising the steps of:**

- **using a software development kit to define custom device profiles** (col. 4 lines 13-15, "management interfaces (i.e. device profiles) may be more easily modified,

enhanced, and customized (using a software development kit) for specific applications”).

- detecting said profiles to determine the type of wireless device or browser making an incoming request to said server (col. 4 lines 4-5, “provide an access device (i.e. server) that supports multiple management interfaces (i.e. profiles of wireless devices or browsers)”, and the device mentioned above is interpreted as a server based on col. 4 lines 16-20, “the management interface of the access device ... (is composed of) an on board SNMP manager whose control interface is an HTTP server”).

Claim 2, is an apparatus version of the claimed method discussed above in claim 1, wherein all claimed limitations have also been addressed above and such an apparatus is deemed to be inherent in the Land method and apparatus for providing multiple management interfaces to a network device, otherwise it would be inoperative.
